

Paul Ikechukwu Ezugworie

Email address: i.ezugworie@gmail.com | LinkedIn: <https://www.linkedin.com/in/ezugworie/>

ABOUT ME

Software Engineer with 6+ years of experience designing and scaling high-performance distributed systems in fintech environments. Specialized in building microservices architectures using Spring Boot, Kafka, and Kubernetes, with proven ability to handle high-throughput systems (20,000+ TPS).

Strong expertise in event-driven architecture, system scalability, and performance optimization. Experienced in delivering production-grade systems end-to-end, from design to deployment and monitoring in cloud-native environments.

SKILLS

Java | Spring (Spring Boot, Spring Data, Spring Integration) | SQL | PostgreSQL | MySQL | MongoDB | Git Apache
Maven Apache Kafka Docker Kubernetes Python Redis | Jenkins Grafana Microservices Prometheus
Bash Batch |

WORK EXPERIENCE

SOFTWARE ENGINEER – INTERSWITCH GROUP – 01/03/2024 – Current – LAGOS , NIGERIA

- Designed and optimized high-throughput microservices processing ~20,000 transactions per second, ensuring reliability and compliance with financial regulations (NIBSS-IDRS).
- Improved system observability and auditability by implementing Kafka-based event-driven auditing pipelines.
- Optimized Apache Spark data pipelines, increasing throughput and reducing latency for large-scale financial data processing.
- Identified and resolved production bottlenecks, improving system performance and fault tolerance in distributed environments.
- Collaborated across teams to deliver resilient backend systems, contributing to reliability and scalability improvements.

SOFTWARE ENGINEER – HARDCORE BIOMETRIC SYSTEMS – 01/03/2022 – 29/03/2024 – ABUJA, NIGERIA

- Developed and optimized over 20 RESTful APIs for secure identity verification systems, significantly improving service reliability and uptime.
- Automated deployment and application update processes, increasing release reliability and reducing manual intervention.
- Identified and resolved performance bottlenecks in Spring Boot application startup, achieving a 25% improvement in launch speed and enhancing user experience.
- Migrated the data of an existing system (Case Management System) of the Nigerian Police to the new system for improvement purposes.
- Documented all implementations and System improvements done.

SOFTWARE ENGINEER – DORK DISCOVERY LIMITED – 03/08/2020 – 31/12/2021 – ABUJA, NIGERIA

- Implemented backend service enhancements that increased data retrieval efficiency by 35% through optimized query handling. These improvements supported real-time analytics capabilities by enhancing backend performance and improving data availability.
- Managed source code using Bitbucket, improving team collaboration and reducing merge conflicts by 20%.
- Led the design of scalable application structures and backend databases, enhancing data retrieval performance and supporting increased user traffic by 30%.

JUNIOR SOFTWARE ENGINEER – BYTEWORKS TECHNOLOGY SOLUTIONS – 04/02/2019 – 31/10/2019 – ABUJA, NIGERIA

- Participated in the full Software Development Life Cycle (SDLC) across three internal projects using Agile methodologies.
- Identified and resolved 11 software bugs through testing and debugging, improving overall system stability.

- Collaborated with senior developers to implement full-stack modules, accelerating project delivery by 15%.
- Actively engaged in peer code reviews, reducing post-deployment defects by approximately 20%.

● EDUCATION AND TRAINING

01/11/2011 – 01/11/2016 Benin, Nigeria

BACHELOR OF ENGINEERING IN COMPUTER ENGINEERING University of Benin

Engineering Mathematics, Engineering Economics, Software Engineering, Control Systems Engineering, Numerical Computation, High and Low Level Programming, Assembly Language Programming, Object Oriented Programming, C Programming, Logic Design & Switching Theory, Computer Architecture and Organisation, Microprocessors and Microcomputers, Operating Systems/Principles, Communication Systems, Advanced Computer Programming, Digital Signal Processing.

● LANGUAGE SKILLS

Mother tongue(s): **ENGLISH**

● PROJECTS

Apache Fineract (Open Source Core Banking Platform)

Contributed to the development and enhancement of Apache Fineract, an open-source financial services platform.

Fraud Detection Assistant with Agentic AI

A fraud detection assistant powered by Agentic AI, designed to analyze autonomously and reason about credit card transactions to detect fraudulent activities

Link <https://github.com/lkechukwu-Ezugworie/fraud-detection-assistant>

CURRENT

Ozzi Web (A Parcel sender)

A peer-to-peer delivery marketplace that connects Travellers (with extra luggage space) with Senders (needing to ship items). The platform facilitates trip listings, weight-based search, secure escrow payments, and end-to-end shipment tracking.

(currently in its MVP stage)

Link <https://ozzi-web.onrender.com/>

CURRENT

Electric Power unit purchase Application

A web application that facilitates procuring electric power units from the existing DISCOs (Distribution Companies) in Nigeria for both commercial and domestic usage.
